About AFAQ.

We are AFAQ, an Omani company specialising in solar and energy storage solutions. We design systems, supply their components, and carry out installation, commissioning and associated electrical works.

We work with facility owners, contractors and developers, tailoring our services to each project —from component supply to complete systems for rooftops and solar power plants.

We serve our clients' projects across the Sultanate of Oman through our branches in Muscat and Salalah.

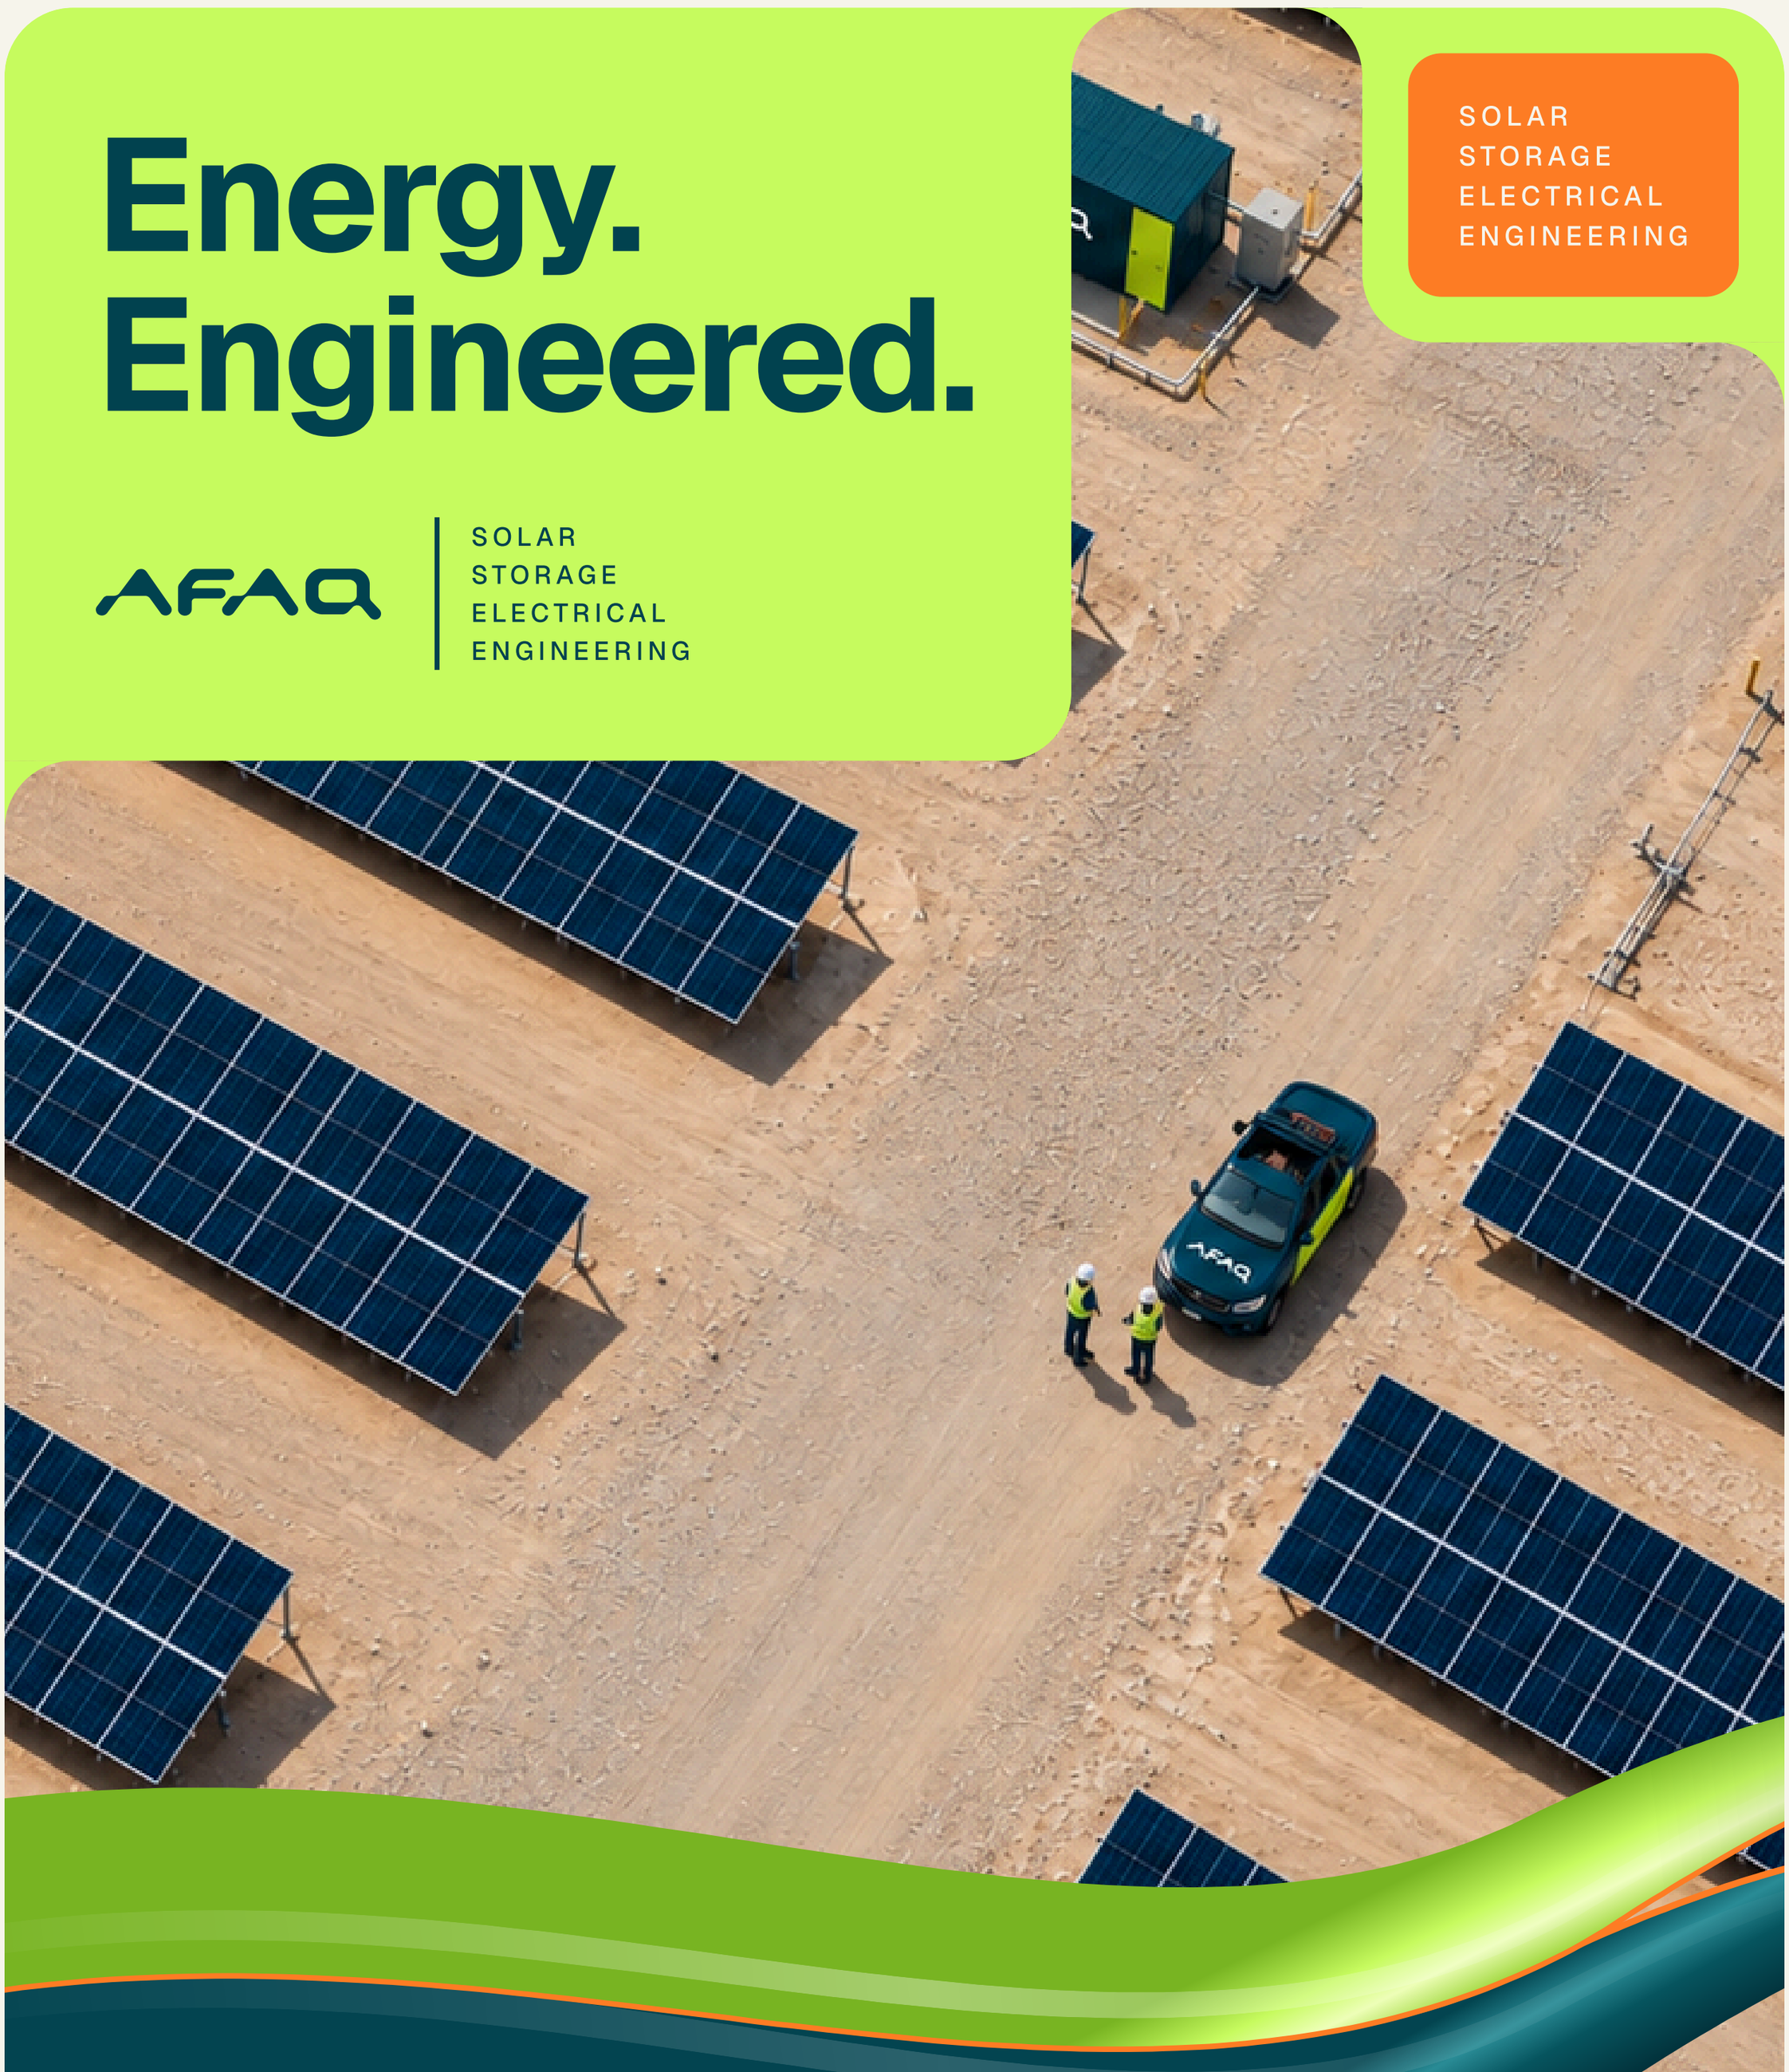
AFAQ | SOLAR STORAGE ELECTRICAL ENGINEERING



System components.

We select components to suit each project and supply solar panels, batteries and inverters through local and international supply agreements.

01

Solar panels

We select panels to suit the available installation area and site conditions.

Supplier:

AACE · Ronma

02

Batteries

We supply lithium batteries sized for the required loads and operating duration.

Supplier:

Goshin · Star Charge

03

Inverters

We select inverters to suit the system configuration and, where applicable, grid connection requirements.

Supplier:

Star Charge

04

Infrastructure

We provide mounting structures, foundations, cabling, and connection and protection panels specified for each site.

Scope of work.

We offer our services individually or as a combined scope to suit each project.

01 Study and design

We analyse loads and consumption, survey the site, size the system, and assess expected generation and financial feasibility.

✓ **Deliverable:** a technical and financial report covering system capacity, expected annual output, cost and payback period.

02 Supply

We supply solar panels, batteries, inverters and electrical equipment under the manufacturers' warranty terms.

✓ **Deliverable:** a component list with specifications, sources and warranty terms.

03 Installation and connection

We carry out installation, electrical works and connections appropriate to the system type, followed by testing and commissioning.

✓ **Deliverable:** a working system and a testing and commissioning record.

04 Operation and maintenance

We monitor system performance and carry out scheduled maintenance under an O&M contract.

✓ **Deliverable:** performance reports comparing actual output with the expected figures.

Engagement options.

01

Supply

We supply components to contractors, installers and facility owners in the specifications and quantities required for each project.

02

Complete project delivery

We manage design, supply, installation, testing and commissioning within a defined scope, providing the owner with a single point of responsibility.

SOLAR
STORAGE
ELECTRICAL
ENGINEERING

System types.

We select the system type based on grid availability, consumption patterns and operating requirements.

SOLAR
STORAGE
ELECTRICAL
ENGINEERING

On-grid

Runs in parallel with the public grid and covers part of daytime consumption, reducing the power drawn from the grid. No batteries required.

Off-grid

Runs independently of the grid, with batteries supplying power outside sunlight hours. For remote sites or locations the grid does not reach.

Hybrid

Combines solar generation, grid power and battery storage, and can be configured to supply selected loads during a grid outage.

Economic value.

An investment decision informed by analysis

We help facility owners assess investment in solar energy by analysing consumption, system cost, expected generation and payback period.

On-site generation can reduce grid reliance and operating costs, depending on system size and consumption patterns. We assess this potential before implementation, so each investment decision is based on project-specific figures.

ENGINEERING

Key sectors.

We provide solar and storage solutions across multiple sectors, tailored to site conditions and operating needs.

Commercial

Shopping centres, hotels and office buildings, with cooling, lighting and operational energy needs.

Industrial

Factories and warehouses, with solutions matched to available roof space, electrical loads and operating hours.

Government

Public buildings, schools and facilities, as part of renewable energy and energy efficiency projects.

Residential

Villas and residential compounds, with solutions matched to household consumption, installation space and storage needs.

Agricultural

Farms, irrigation pumps and cold stores, including remote and diesel-powered sites.

What we offer.

Local and international supply agreements

We work through local and international supply agreements to provide components under the agreed supply and manufacturer warranty terms.

Supply from a factory in Oman

We supply AACE panels manufactured in Oman, supporting local sourcing for projects.

Local warranty support

We handle panel warranty claims in Oman under the manufacturer’s warranty terms.

In-country value

We support local content by supplying Oman-made panels for projects and tenders.

Serving projects across Oman

We serve our clients’ projects across the Sultanate of Oman through our branches in Muscat and Salalah.

Delivery team

Our team brings together engineering design, supervision, site installation and commissioning.
